1. The first part of the paper is devoted to a general
discussion of the various methods of determining
the position of the Earth's axis. It is shown that
the most accurate method is that of observing
the positions of the stars at different times of
the year. This method is based on the fact
that the Earth's axis is inclined to the plane
of the ecliptic. The inclination is constant,
and the stars appear to move in circles
around the Earth's axis. By observing the
positions of the stars at different times of
the year, the position of the Earth's axis
can be determined. This method is the most
accurate, and it is the one which is used
in all the most accurate determinations of
the position of the Earth's axis.
